COMPUTER ETHICS AND SOCIAL

COMPUTING & ETHICAL ISSUES

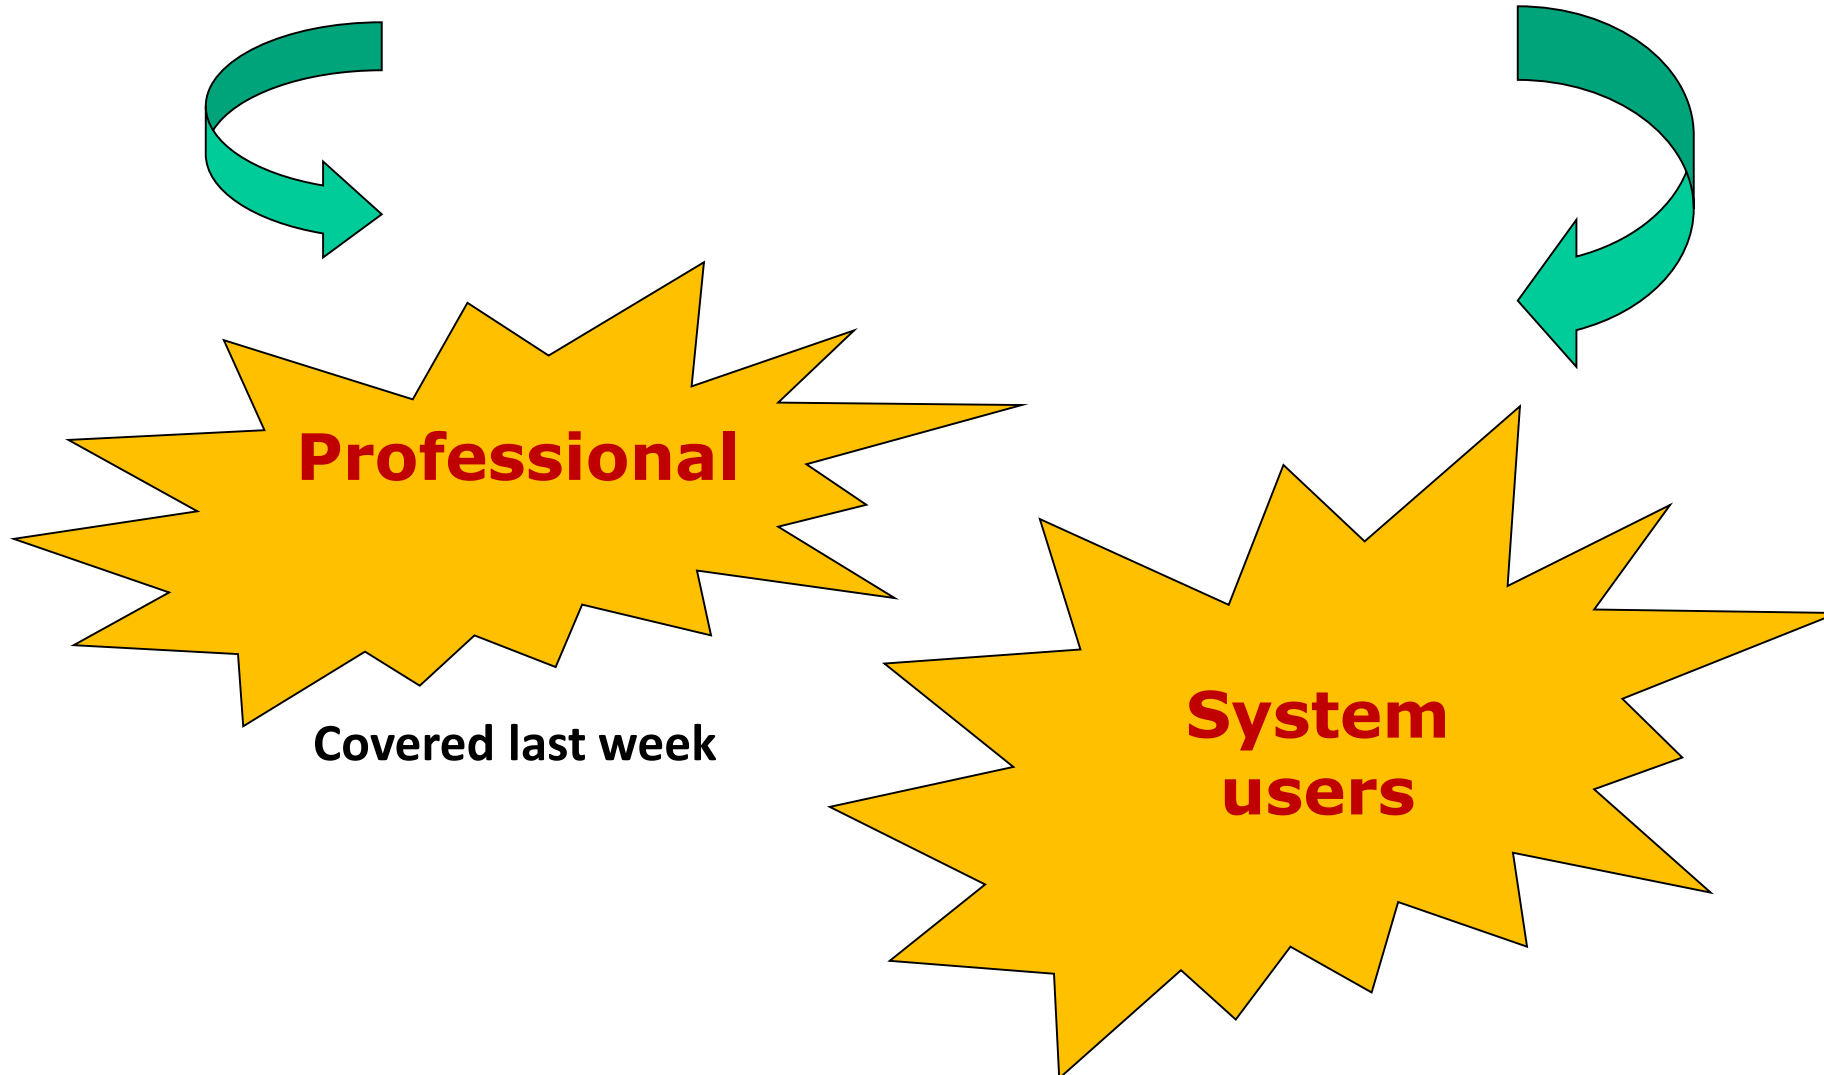

EVOLUTION OF THE ETHICS THEORY

RECAP: ETHICS THEORY

TELEOLOGI	DEONTOLOGI
• Focus on the consequences • Approach: utilitarianism (i.e. an action is considered as ethical if brings happiness)	• Focus on responsibilities/duty • Approach: Kantian (i.e. ignoring the happiness as long as it is responsibility)

RECAP: TYPES OF CODE OF ETHICS IN ICT

WHY WE NEED TO LEARN ABOUT COMPUTER ETHICS?

As a guidance

To discipline

Full advantage of ICT

Good value and
positive attitude

To avoid social issues
relates to moral and
computer ethics

Improve the quality
of moral value

Productive working
environment

Create an informative
society with positive
value

WHY THE PUBLIC FOUND IT DIFFICULT TO UNDERSTAND COMPUTER ETHICAL ISSUES?

Could not see the impact and social problems of ICT.

Not aware of cyberlaw.

No or less exposure on the influence, power and the usage of computer.

Unknowledgeable (completely/less ignorant).

Public do not receive direct impact when issue arise.

ICT USAGE: ETHICAL DILEMMA

1. Economy and Social Issues

Create new task/job – unemployment rate/jobless increase.

Ease of task but put on more pressures – may cause family problems.

Computers relate with new opportunity, modernisation but create social bias (unaffordable).

ICT USAGE: ETHICAL DILEMMA

2. Issue on Individual Routine/Exercise

Password protection, back up, aware on privacy, hardcopy etc.

3. Software Development Issue

Depends to the expert, trustworthy, moral values, quality.
Ethics should guide for a good conduct.

Users could not afford to buy software license. Use pirate software to catch up with the technologies.

ICT USAGE: ETHICAL DILEMMA

4. Management and Staff

Dilemma from various powers and authorities.

Examples:

Destroying programs by the staffs who are not satisfied.

Manager forces the subordinates to break rules/principles in writing programs.

ICT USAGE: ETHICAL DILEMMA

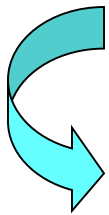

5. Computer Processing Issue

UNTRUSTWORTHY

Operation involves untrusted software and hardware.

Unable to deliver the services.

DELAY IN DELIVERING THE OUTPUT

Pressure to client

ICT USAGE: ETHICAL DILEMMA

6. Work Environment Issue

Monitoring by the employer.

E.g. Is it ethical to monitor employee's phone calls, movement, activities etc.?

7. Computer Crimes

Fraud, hoax, unreported, increasing and complex .

ICT USAGE: ETHICAL DILEMMA

8. Data Collection, Storage and Access

Relates to privacy, confidentiality and accuracy.

Is it about between to gather all information or necessary information?

Permission from the owner.

How to validate the data (accurate, precise and true)?

ICT USAGE: ETHICAL DILEMMA

9. Source Exploitation

Interrupt services and exploit system vulnerability.

10. Client vendor Issue

Vendor: provide services and receive payment.

Client: provide payment to receive services.

Issue? Unable to deliver quality output/poor services.

ICT USAGE: ETHICAL ISSUES

There are four computing aspects
which often create ethical problems:

1. Privacy
2. Information Accuracy
3. Rights
4. Information Access

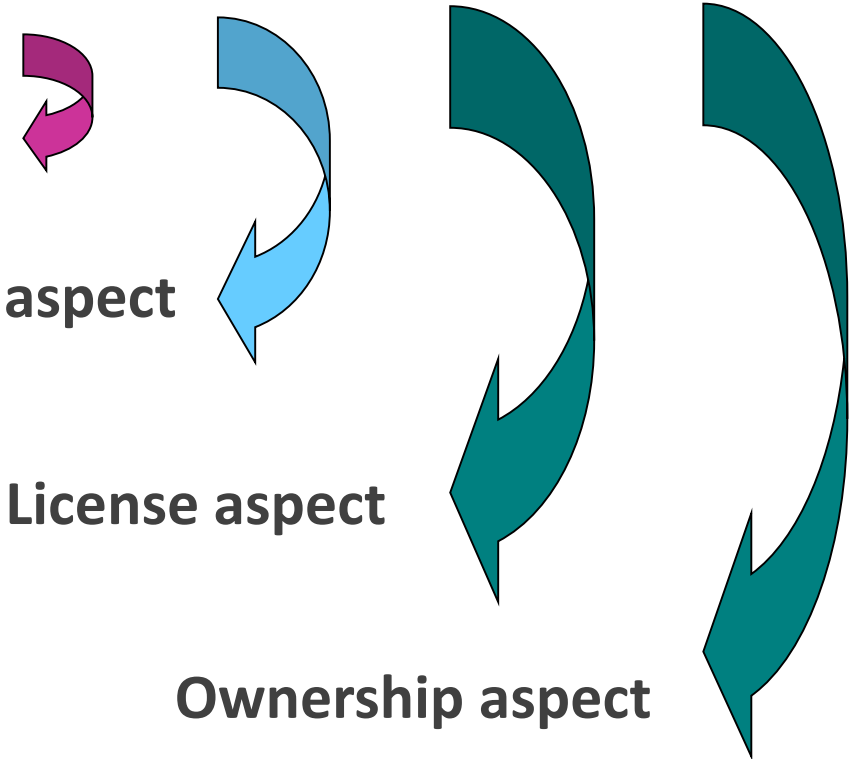

Misconduct among the computer professional

Privacy aspect

Accountability aspect

License aspect

Ownership aspect

ICT USAGE: ETHICAL ISSUES

**When conflict
arise?**

Involve **database** usage that store **private information**
(marketing strategy)

**Form of
conflict?**

To obey company **policy** and **client** requirement

What to do?

Think of the **benefits** and the **consequences to the owner** if
their private information is kept/disseminated by organisation

ICT USAGE: ETHICAL ISSUES

Accountability/responsibility aspect

The professional are responsible on the security, application operability from the planning, design, implementation, testing and documentation.

Testing plan by the management-service, maintenance release, beta version etc.

ICT USAGE: ETHICAL ISSUES

Accountability/responsibility aspect

Software in market. Who should be responsible if problem arise?

programmer? dealer?
manager?

user? – could not understand the capability
of the software?

ICT USAGE: ETHICAL ISSUES

License aspect

Society needs an assurance from the professionals on the ethical issue/practice.

License e.g. medical license, authority, product and professional certificates etc.

Why licensing?

It provides high confidence, trustworthy and efficiency towards the professional practice and output.

Allow the professional to follow the guideline-quality.

Avoid the professional from misconduct – sit an exam

MAKING ETHICAL DECISION

Analyse scenario from various perspective:

Ethics and law association

Formal and informal reason

Principles and theory of ethics

MAKING ETHICAL DECISION

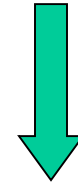

Formal and informal reason

Formal

Relate to policy
and law

Informal

Individual, isolated and
not related to policy law

MAKING ETHICAL DECISION

Principles and theory of ethics

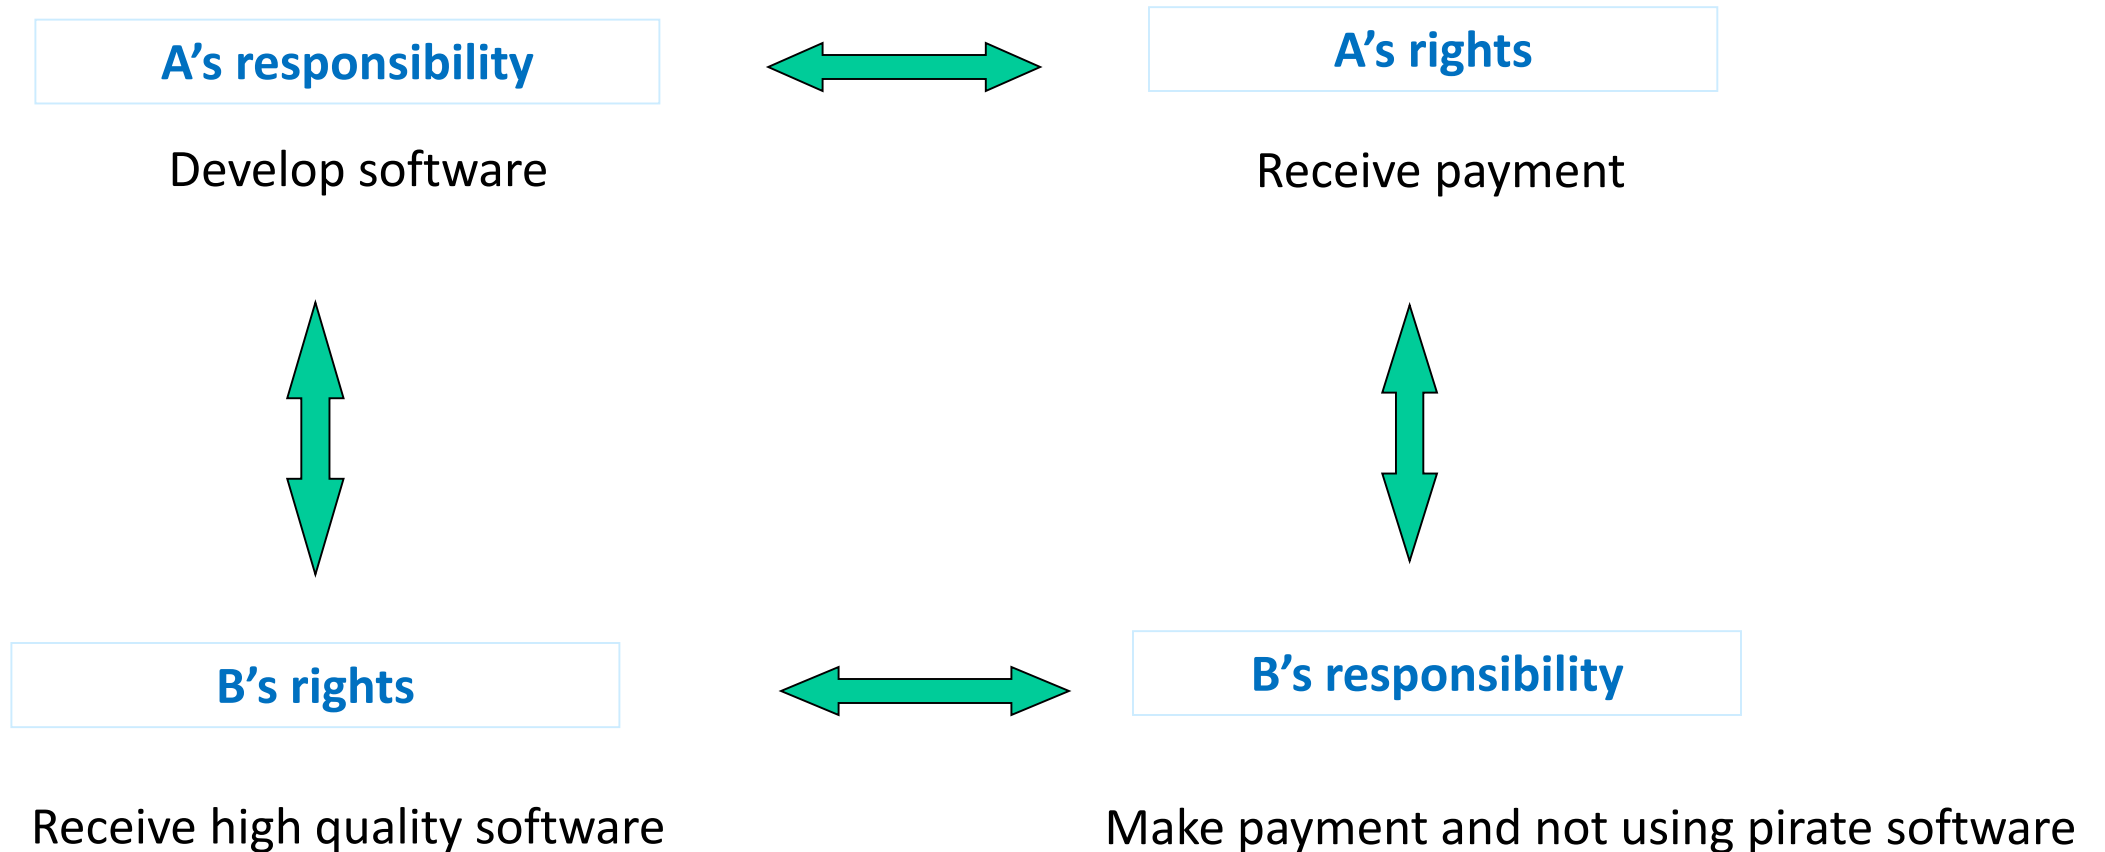

Principles of ethics as a guidance:

A certain action is considered ethical if other members of society **take the same action**, together for the sake of **similar interest**.

A certain action is considered ethical if it brings **justice to the public**.

MAKING ETHICAL DECISION

Relationship between rights and responsibility

**THANK
YOU**
